SV: OpenPHIGS patches ownership

Hello again.

I grant you permission to revert back to the original license used by x.org for the whole OpenPHIGS library (libphigs)

As long as your contributions are published, the intention we wanted to achieve by using LGPL is kept.

I am the single person who worked on this project, and I have consulted with the chairman emeritus of Surplus Users Ham Society before granting this request.

Revolver was just an experiment to make an application using OpenPHIGS, and it is not needed for the library to work. So this part you may very well just drop support for, this also means that libGLw and libVk are not needed. This move actually makes libphigs easier to maintain.

Finally, I am glad that someone found OpenPHIGS useful and I am very excited to follow the progress on this.

Cheers,
/Alexander
